

**SERVANT KEEPER CHURCH MANAGEMENT SOFTWARE INTEGRATES WITH HEARTLAND
CHECK MANAGEMENTSM FOR REMOTE DEPOSIT CAPTURE AND CHECK MANAGEMENT
SOLUTIONS**

Church ministry groups and nonprofit clients can now leverage fully integrated end-to-end check processing to drive efficiencies

PRINCETON, NJ — July 20, 2010 — Servant PC Resources — the creator of Servant Keeper Church Management software, and a market leader in church and nonprofit software — has integrated its technology with Heartland Check Management — a total, end-to-end check processing platform — to provide remote deposit capture and check management solutions to its clients. Heartland Check Management, a product of Heartland Payment Systems®, one of the nation’s largest payments processors, is powered by transmodus®. Transmodus is a technology leader in network-enabled remote deposit and check management automation.

“Servant Keeper Clients can now take advantage of all aspects of automated check processing — from remote deposit and express funding to recovery,” said Tony Capucille, director of check services at Heartland. “Importantly, Heartland’s technology is bank-neutral, so they can utilize the system regardless of where they bank and how many accounts they have.”

With the Heartland solution, a client simply scans a check from their location using a remote scanner, and the deposit is processed. The client receives automatic notifications and can monitor every step of the deposit 24/7/365 in real-time. At that point, the transactions are posted in Servant Keeper format to reconcile all member contributions without manual entry — making it an end-to-end solution. Additionally, the client can elect to have bad checks handled by Heartland’s automated recovery program.

“This integrated solution offers our clients efficiency, accuracy and convenience in the processing of donations and contributions. Providing our churches and nonprofit organizations automated check services in this seamless manner will save time, money and resources at a time when those things are needed most. We are excited to work with Heartland and transmodus to augment our software as we continue developing comprehensive solutions that improve ministry management,” said Bill Newman, general manager of Servant PC Resources, Inc.

About Servant Keeper Church Management Software

Created in 1994, Servant Keeper is one of the leading church software products in the market with over 22,000 organizations currently deployed. Servant Keeper is a database management system designed to help non-profit organizations track donors and members. Servant Keeper manages attendance, contributions, small groups, reporting, directories, mailings, child-safety, and more. The program is designed by people in the non-profit industry to be a tool that even volunteers and those with little computer experience can use in powerful ways.
